Myo-Inositol roles in ovulation

Myo-inositol restores normal ovulatory activity and fertility in women with PCOS:

Myo-inositol combined with folic acid 2g / day was administered continuously for 6 months.

Results:

22 out of the 25
(88%) patients restored at

18
(72%) maintained normal

total of 10
singleton pregnancies

Ovulatory and Metabolic effects of Myo-Inositol in Polycystic Ovary syndrome

Subject:

44 women with the Polycystic Ovary Syndrome were studied for eight weeks

Results:

After eight weeks, 19 women in the inositol group had ovulated.

*Ovulation was indicated by a serum progesterone concentration greater than 8 mg per milliliter. ($P < 0.001$)

MELATONIN roles in ovulation

C= Cholesterol

E= Estradiol

FertiBoost

M.W.H

Natural formula to promote egg quality and ovarian function:

- **Myo-inositol** combined with **Folic Acid** restore normal ovulatory activity and fertility in women with PCOS
- **Melatonin** is a powerful free-radical scavenger and wide-spectrum antioxidant that prevents atresia.
- **Vitamin E** improves the endometrial response via antioxidant & anticoagulant effects.
- **Co-enzyme Q10** is important for energy production and Oocytes maturation.
